

# A Multiplexer System for Measurement of Gaseous Emissions

Cale Boriack

Ronald Lacey, Saqib Mukhtar

Atilla Mutlu, Sergio Capareda

Bryan Shaw, Calvin Parnell, Jr.

# Objectives

- Develop a method to increase productivity when sampling during a field campaign
- Automate data collection

# Overview

- Sampling Methodology
- System Design
- Benefits of using a multiplexer
- Concluding remarks

# Sampling Methodology

- Flux chambers
  - 30 minute conditioning @ 7L/min input
  - 30 minute sample @ 7L/min input
  - 2L/min drawn from chamber
  - vented

# Sampling Setup

# Sampling Setup

# Sampling Setup

# Sampling Protocol

- Sample each management area within the facility
- Grids placed in management area with one sample point in each boxed grid point
- Sample order is random
- Sample point within the box is random

# Multiplexer Sampling Protocol Example

- Small Open lot
- 12 Grid points
- Start time is 9:00 am
- 1 multiplexer setup
  - 3 chambers

# Multiplexer Sampling Protocol

9:01 am

-  Ready
-  Flush
-  Sample

# Multiplexer Sampling Protocol

9:05 am

- Ready
- Flush
- Sample

# Multiplexer Sampling Protocol

9:31 am

-  Ready
-  Flush
-  Sample

# Multiplexer Sampling Protocol

9:35 am

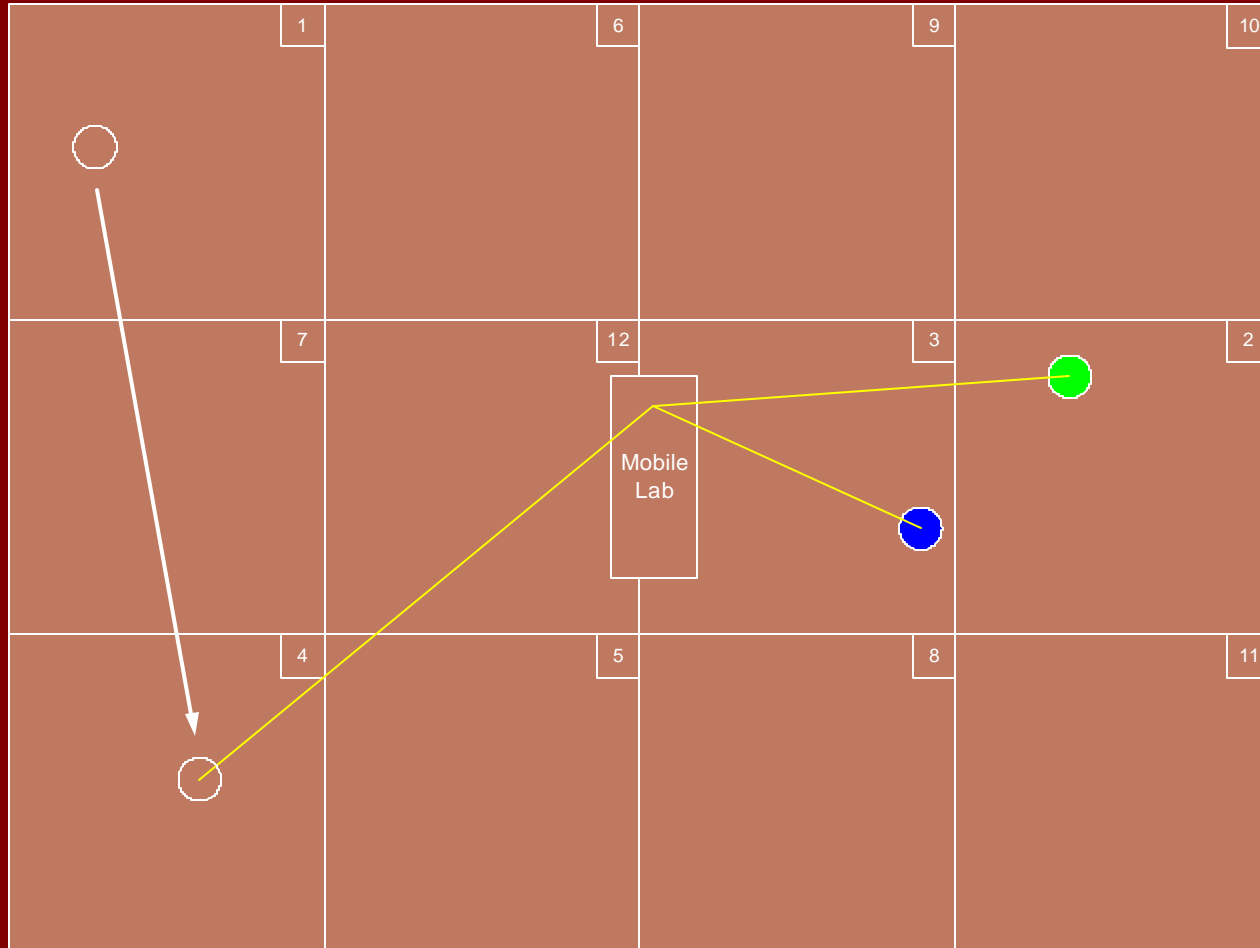

-  Ready
-  Flush
-  Sample

# Multiplexer Sampling Protocol

10:01 am

-  Ready
-  Flush
-  Sample

# Multiplexer Sampling Protocol

10:05 am

-  Ready
-  Flush
-  Sample

# Multiplexer Sampling Protocol

10:31 am

-  Ready
-  Flush
-  Sample

# Multiplexer Sampling Protocol

10:35 am

-  Ready
-  Flush
-  Sample

# Multiplexer Sampling Protocol

11:01 am

# Multiplexer Sampling Protocol

11:05 am

-  Ready
-  Flush
-  Sample

# Multiplexer Sampling Protocol

11:31 am

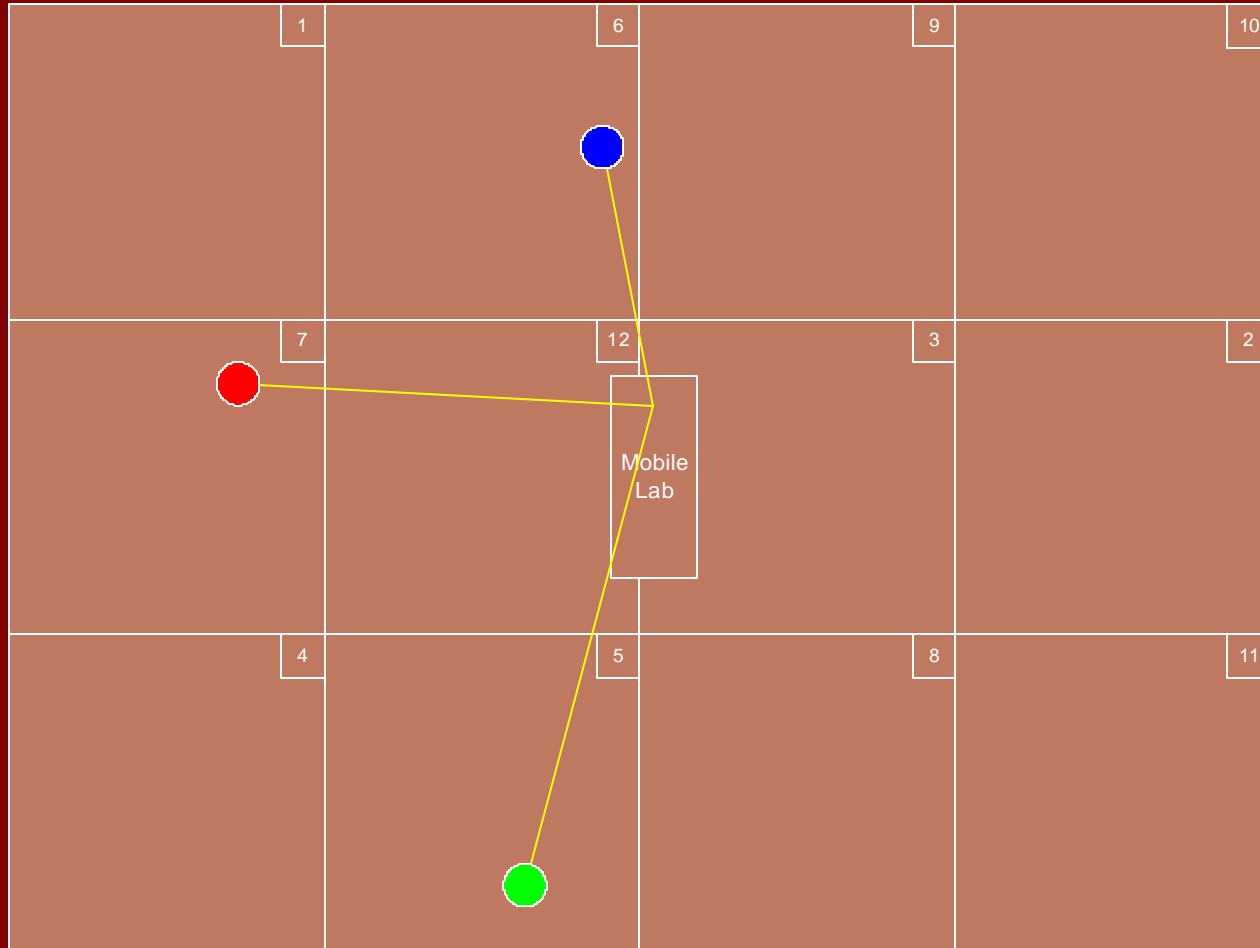

-  Ready
-  Flush
-  Sample

# Multiplexer Sampling Protocol

11:35 am

# Multiplexer Sampling Protocol

12:01 pm

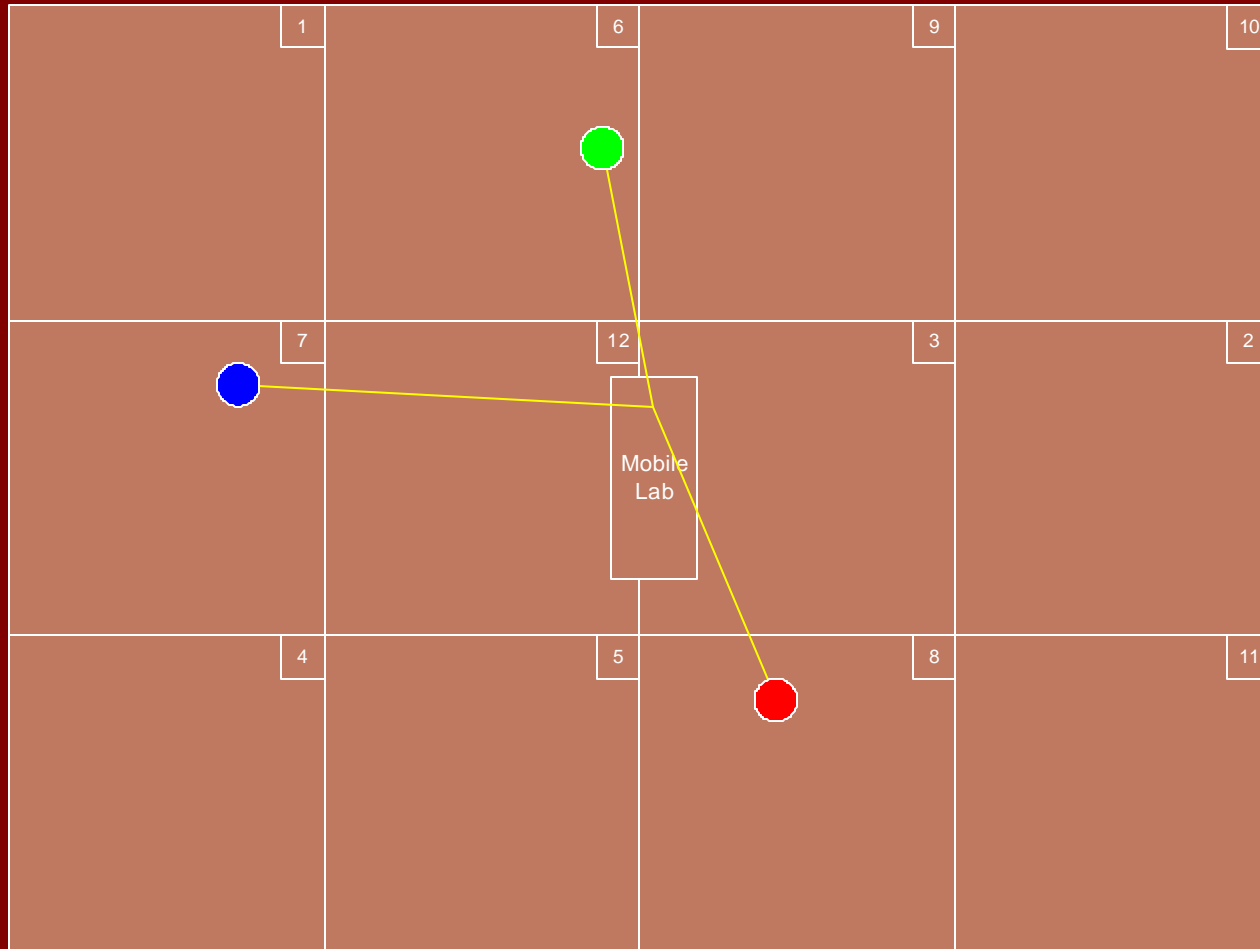

- Ready
- Flush
- Sample

# Multiplexer Sampling Protocol

12:05 pm

-  Ready
-  Flush
-  Sample

# Multiplexer Sampling Protocol

12:31 pm

# Multiplexer Sampling Protocol

12:35 pm

- Ready
- Flush
- Sample

# Multiplexer Sampling Protocol

1:01 pm

# Multiplexer Sampling Protocol

1:05 pm

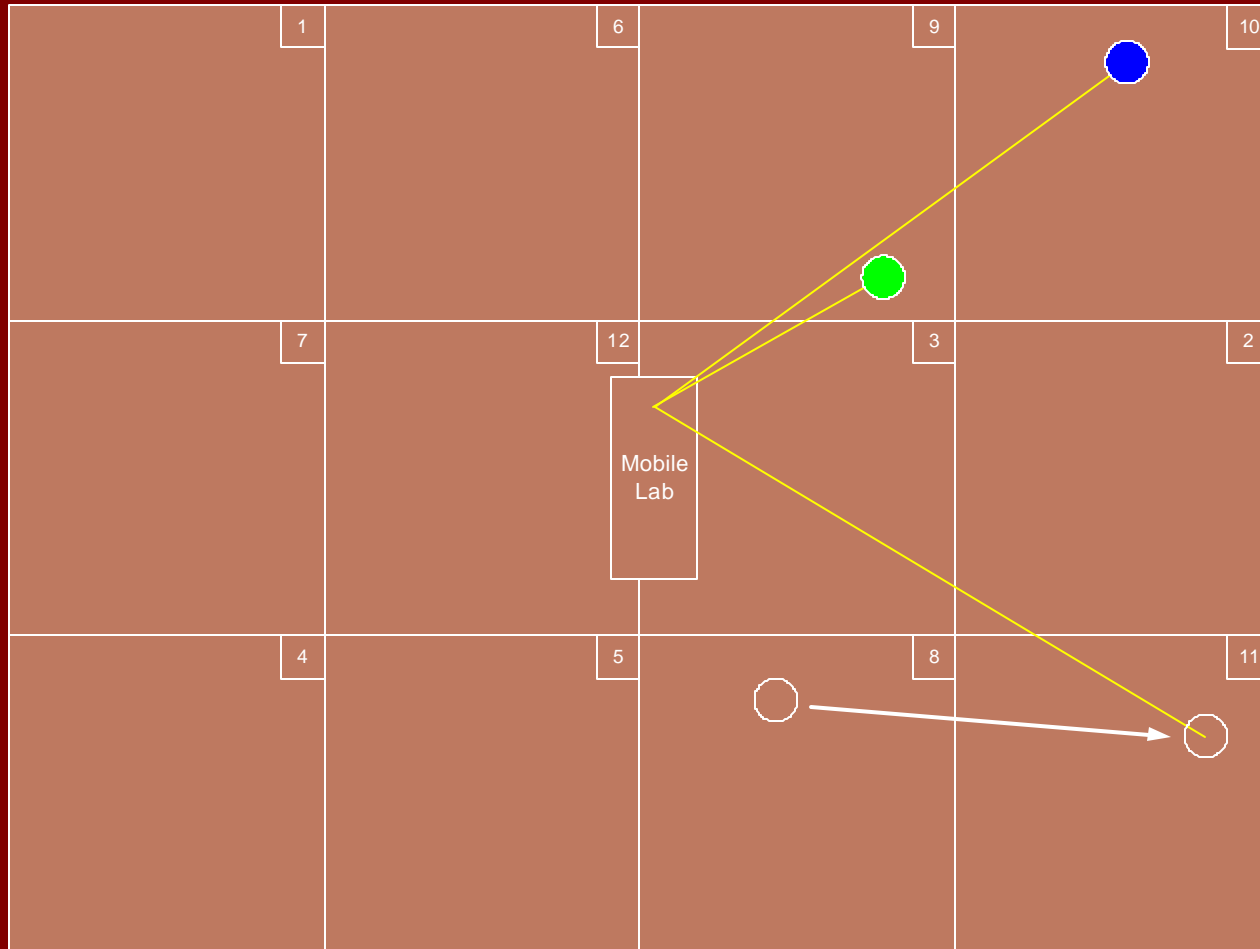

-  Ready
-  Flush
-  Sample

# Multiplexer Sampling Protocol

1:31 pm

- Ready
- Flush
- Sample

# Multiplexer Sampling Protocol

1:35 pm

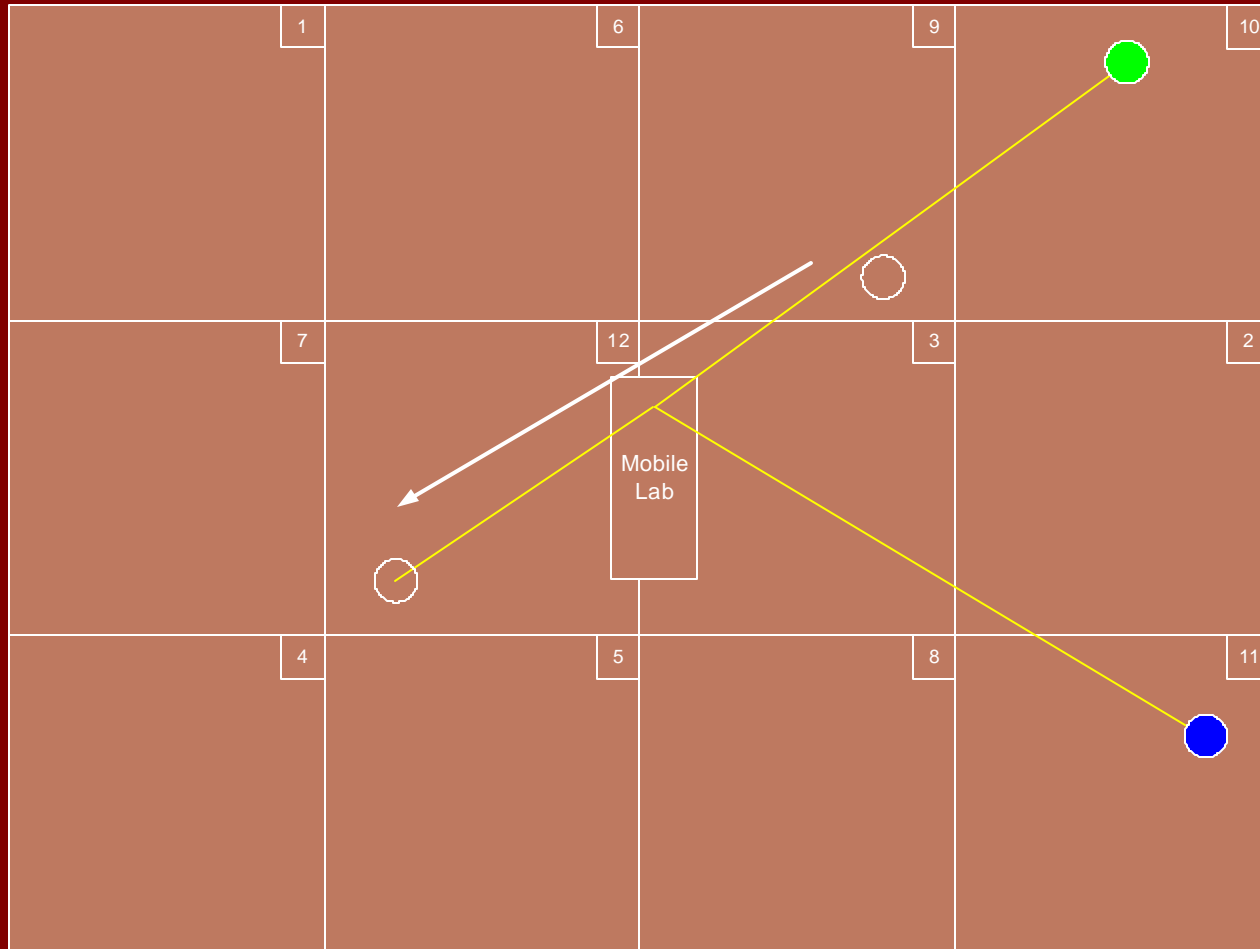

-  Ready
-  Flush
-  Sample

# Multiplexer Sampling Protocol

2:01 pm

# Multiplexer Sampling Protocol

2:05 pm

-  Ready
-  Flush
-  Sample

# Multiplexer Sampling Protocol

2:31 pm

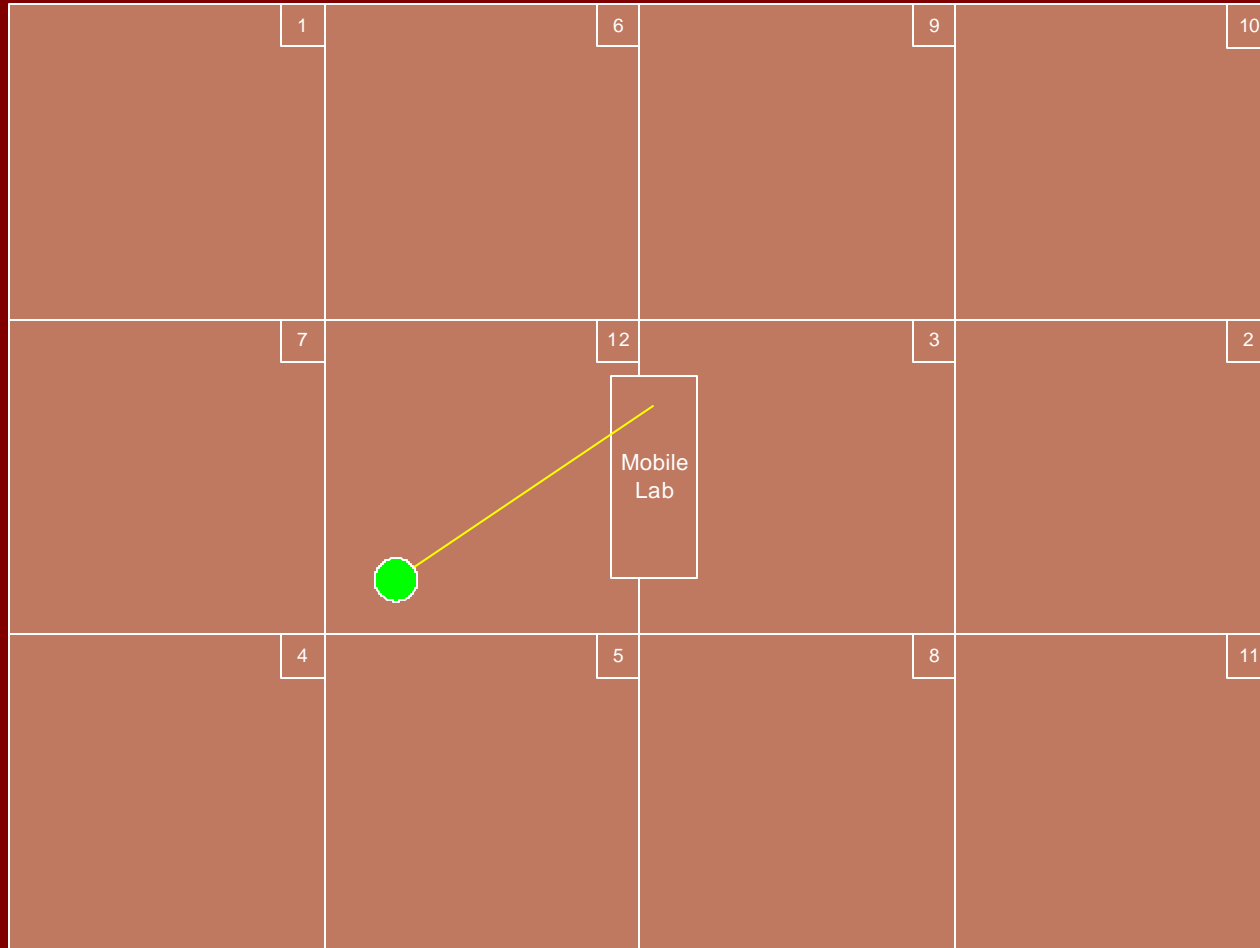

-  Ready
-  Flush
-  Sample

# Multiplexer Sampling Protocol

3:01 pm

-  Ready
-  Flush
-  Sample

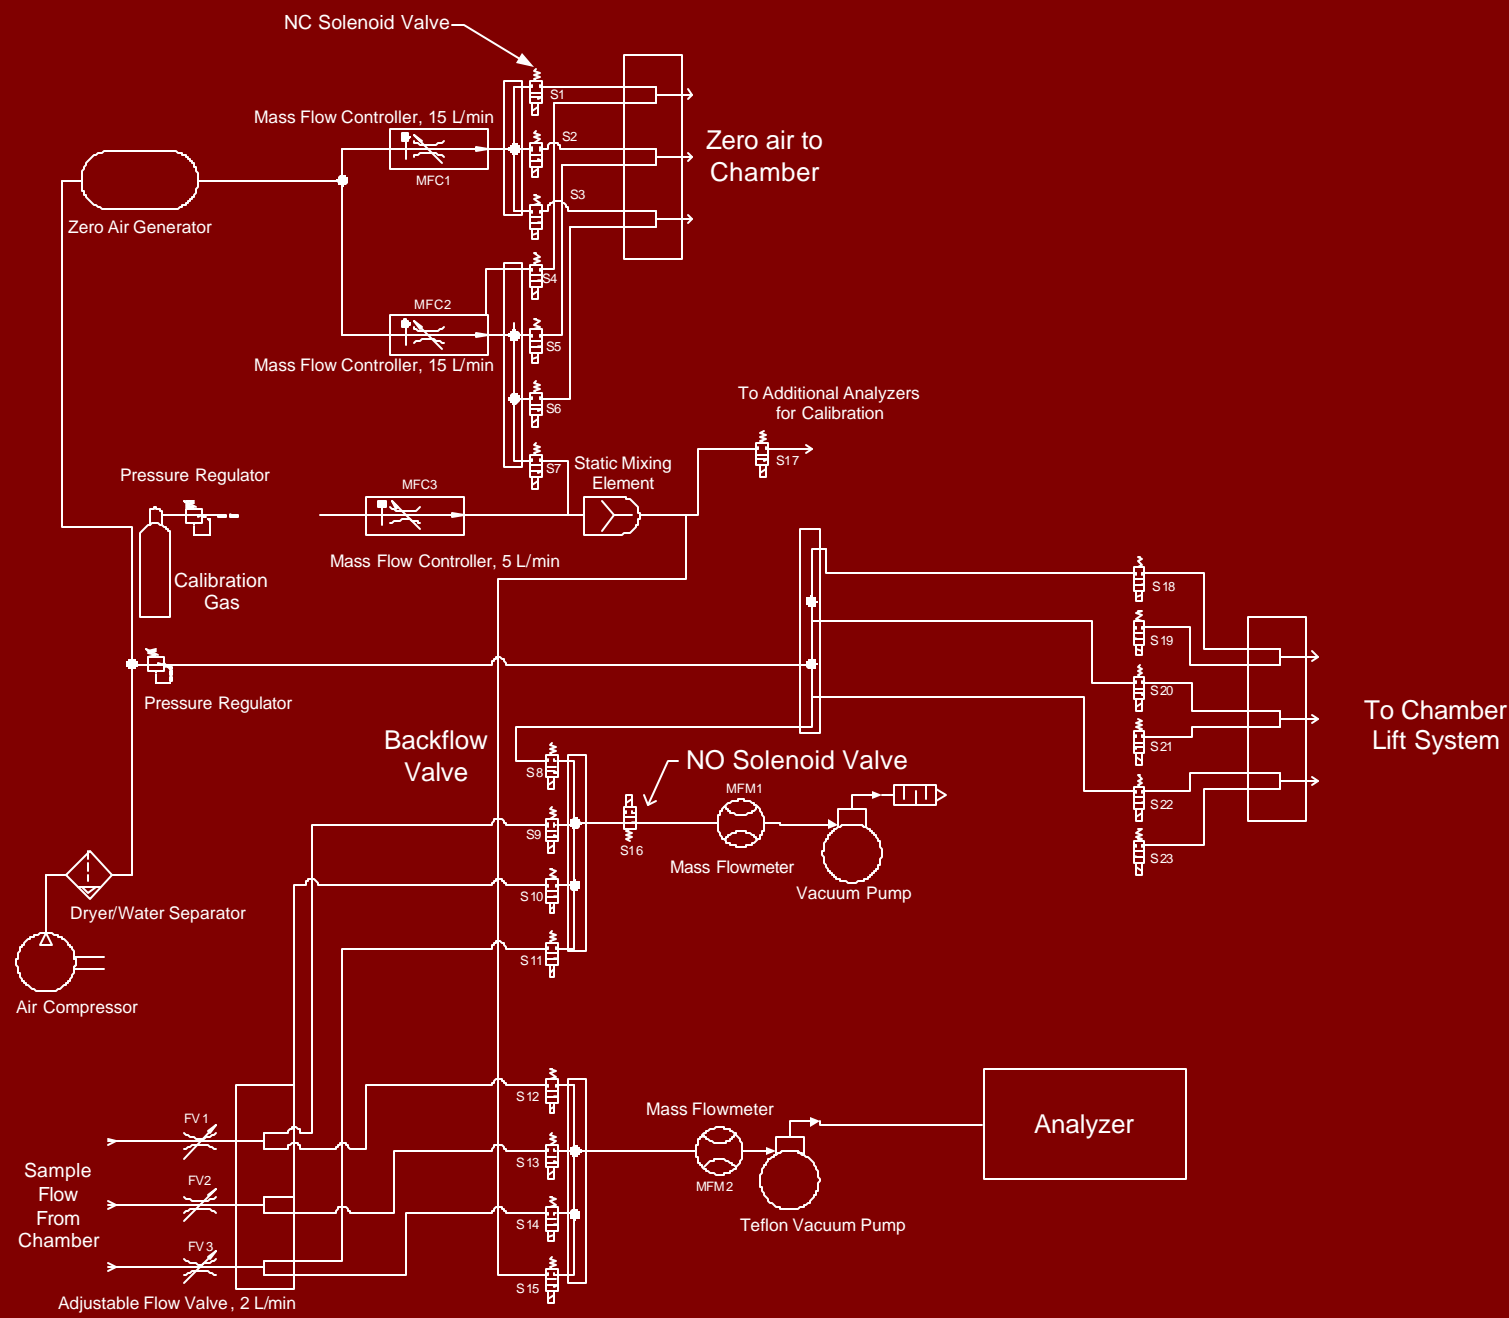

# System Design

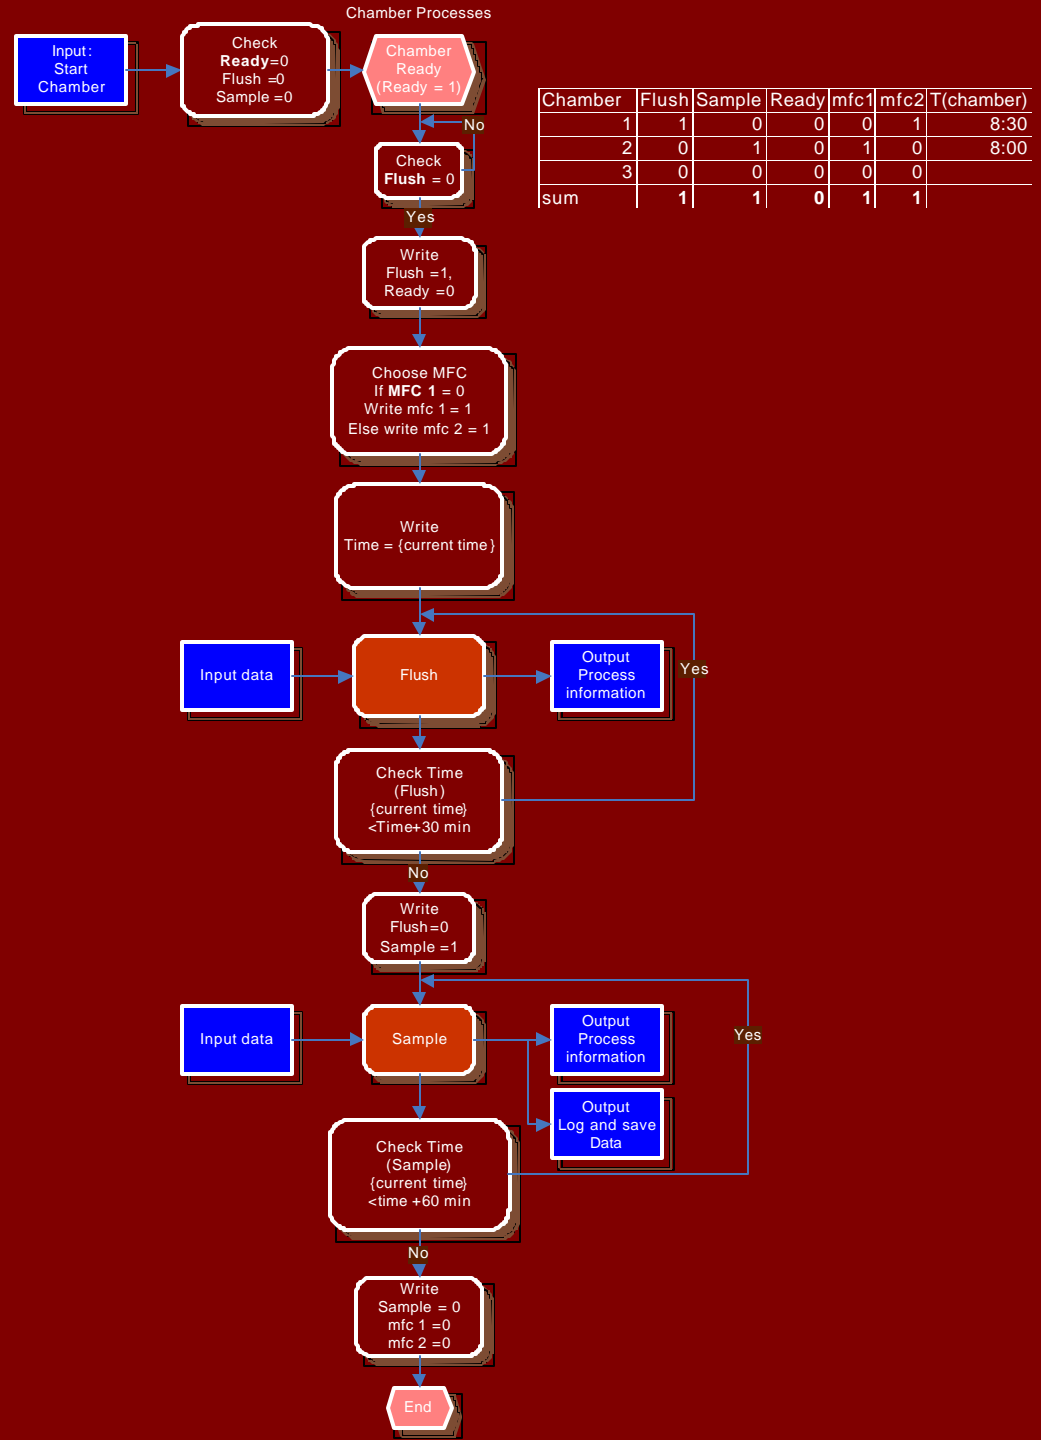

- 23 solenoid valves
- 3 mass flow controllers
- 1 Mass flow meter
- 3 Flow valves
- Control system
- Outdoor Enclosure

# System Design

# Chamber Process Controller

# Benefits of Multiplexing

- Ability to use equipment at full capacity
- Increase data collection capacity
- Increase sampling rate

# Results from 2002-2004

- No multiplexer (2002)
  - 16 hr/day, 4 days
  - 29 samples
- 1 multiplexer (2003)
  - 16 hr/day, 4 days
  - 55 samples
- 1 multiplexer (2004)
  - 24 hr/day, 4 days
  - 127 samples

# Additional requirements

- Computer control
- Error checking
- Data management
- Additional manpower

# Concluding remarks

- Multiplexing allows more efficient use of resources
- Results in a lower cost to sample
- Multiplexer may be applicable to other gas sampling processes

Ya'll comin'  
In here?

I think they  
are!
